Reply to Office Action of: August 2, 2004

Please amend the application as follows:

In the Specification:

Please replace Paragraph [06], beginning at page 2, with the following rewritten paragraph:

Another limitation with providing icon information on displays of mobile terminals is that it requires the user to read the information on the mobile terminal's display. As the mobile terminal receives new contextual information, the user may not become aware of this information. The mobile terminal typically receives new contextual information as the user moves from one area to another. A user on the move, however, is not always able to look at his/her mobile terminal. For example, the user may not wish to look at the mobile terminal while he/she is driving a vehicle. As another example, the user will not know to look at the mobile terminal if it is out of sight or in his/her pocket. As still another example, the user may be impaired vision. Accordingly, unless he/she actually reads the mobile terminal display, the user may not learn of certain information on a timely basis.
